allantoin catabolic process
allantoinase activity
mediator complex
cobalt ion binding
ureidoglycine aminohydrolase activity
vesicle−mediated transport
HslUV protease complex
triphosphatase activity
threonine−type endopeptidase activity
diphosphomevalonate decarboxylase activity
isopentenyl diphosphate biosynthetic process, mevalonate pathway
calcium−dependent cysteine−type endopeptidase activity
response to organic substance
lactate oxidation
lipopolysaccharide core region biosynthetic process
lipopolysaccharide heptosyltransferase activity
protein−N(PI)−phosphohistidine−lactose phosphotransferase system transporter activity
septin ring assembly
septin ring
2',3'−cyclic−nucleotide 3'−phosphodiesterase activity
2'−5'−RNA ligase activity
diacylglycerol kinase activity
TBP−class protein binding
ribonuclease M5 activity
nucleic acid phosphodiester bond hydrolysis
phospholipid metabolic process
peptidoglycan glycosyltransferase activity
RNA strand−exchange activity
posttranscriptional regulation of gene expression
RNA strand annealing activity
mismatch base pair DNA N−glycosylase activity
base−excision repair, AP site formation
exodeoxyribonuclease V activity
hydrogen peroxide catabolic process
ADP−glyceromanno−heptose 6−epimerase activity
fructose 2,6−bisphosphate metabolic process
siderophore transmembrane transporter activity
ion transmembrane transporter activity
host cell cytoplasm
zymogen activation
virus tail
nickel−transporting ATPase activity
glycerol−3−phosphate transmembrane transport
electron transport coupled proton transport
gamma−glutamylaminecyclotransferase activity
response to nickel cation
rhamnulose−1−phosphate aldolase activity
Type III site−specific deoxyribonuclease activity
L−PHG−FO 2−phospho−L−lactate transferase activity
tetrahydrodipicolinate N−acetyltransferase activity
tricarboxylic acid cycle enzyme complex
fumarate metabolic process
tryrnidine kinase activity
phosphate acetyltransferase activity
threonine biosynthetic process
isoleucine biosynthetic process
crossover junction endodeoxyribonuclease activity
acetate CoA−transferase activity
DNA−(apurinic or apyrimidinic site) endonuclease activity
'de novo' UMP biosynthetic process
aspartate−semialdehyde dehydrogenase activity
daunorubicin transport
doxorubicin transport
branched−chain amino acid transport
glycine−tRNA ligase activity
glycyl−tRNA aminoacylation
D−proline reductase (dithiol) activity
oxidoreductase activity, acting on X−H and Y−H to form an X−Y bond, with a disulfide as acceptor
rRNA (adenine−N6−)−methyltransferase activity
histidine decarboxylase activity
histidine metabolic process
protein secretion by the type VI secretion system
tryptophan biosynthetic process
heme binding
tetrapyrrole biosynthetic process
glutamate−1−semialdehyde 2,1−aminomutase activity
oxidoreductase activity, acting on other nitrogenous compounds as donors
glutamyl−tRNA reductase activity
ferric iron binding
hydroxymethylbilane synthase activity
sulfate reduction
anthranilate synthase activity
3'(2'),5'−bisphosphate nucleotidase activity
phosphoadenylyl−sulfate reductase (thioredoxin) activity
outer membrane
xylan 1,4−beta−xylosidase activity
cysteine biosynthetic process
proline catabolic process to glutamate
L−ribulose−phosphate 4−epimerase activity
double−strand break repair via homologous recombination
cobalt ion transmembrane transporter activity
dolichol−linked oligosaccharide biosynthetic process
NAD(P)+ transhydrogenase activity
transcription by RNA polymerase III
arsenate reductase (glutaredoxin) activity
glutathione synthase activity
deacetylase activity
lactate fermentation to propionate and acetate
tocopherol cyclase activity
glycopeptide alpha−N−acetylgalactosaminidase activity
creatinase activity
creatine biosynthetic process
creatinine catabolic process
[acyl−carrier−protein] phosphodiesterase activity
oxidoreductase activity, oxidizing metal ions
photosystem II oxygen evolving complex
toxin activity
response to reactive oxygen species
carbon−carbon lyase activity
2−aminoethylphosphonate−pyruvate transaminase activity
oxidoreductase activity, acting on NAD(P)H, nitrogenous group as acceptor
cellular response to oxidative stress
oxidoreductase activity, acting on peroxide as acceptor
catalase activity
formyltetrahydrofolate deformylase activity
cytolysis by virus of host cell
dihydrofolypolylysine−residue succinyltransferase activity
chitosanase activity
proline catabolic process
actin filament binding
superoxide dismutase activity
efflux transmembrane transporter activity
carboxyl−O−methyltransferase activity
RNA polymerase II regulatory region sequence−specific DNA binding
purine−rich negative regulatory element binding
protein−malonylysine demalonylase activity
protein−succinylysine desuccinylase activity
3−oxo−5−alpha−steroid 4−dehydrogenase activity
steroid metabolic process
superoxide metabolic process
polysaccharide binding
toxin transport
N−acylphosphatidylethanolamine−specific phospholipase D activity
organic phosphonate catabolic process
intracellular membrane−bounded organelle
tRNA (5−methylaminomethyl−2−thiouridylate)−methyltransferase activity
thioredoxin peroxidase activity
proline dehydrogenase activity
pyridoxamine−phosphate oxidase activity
glycine metabolic process
xenobiotic transport
GDP−D−glucose phosphorylase activity
glutamate decarboxylase activity
glutamate metabolic process
lipoyl(octanoyl) transferase activity
urea transmembrane transport
urea transmembrane transporter activity
lipoate biosynthetic process
lipoate synthase activity
trehalose biosynthetic process
killing of cells of other organism
defense response to Gram−negative bacterium
